Kogod Now

THE AMERICAN UNIVERSITY KOGOD SCHOOL OF BUSINESS | FALL 2012

Knowledge is increasingly viewed as an economic driver. It's at the heart of innovation, and a justification for job creation, mergers and acquisitions, and alliances. But which tools best promote knowledge creation — and how does one assemble the right team of knowledge workers? When human capital equals competitive advantage, how do managers deal with the ebb and flow of employees? Find out in the upcoming issue.

Further, Ford Motor Co. Chairman Bill Ford shares his view on the future of transportation; discover how Brazil is bankrolling the development of a shipbuilding cluster; and find out how Tesla Motors used strategic alliances to drive production of green vehicles.
